

Simplify how you navigate the complex landscape of scientific literature

Built by
scientists
for all
researchers

EVID AI

Accelerate insights with our **next generation AI-powered platform** for finding, reviewing, and understanding literature-based evidence

Pharma-grade evidence
generation workflows in
a single platform

Meeting the **full spectrum** of your literature review needs

Leverage EVID AI's capabilities with **self-serve access** or our **team of Evidence Synthesis experts**

Getting up to speed, tight timelines

- Market landscaping
- Competitive intelligence
- New indication overview
- Literature surveillance
- KOL identification and profiling
- Target journal selection

Focused research questions

- Early desk research
- Quick identification of pertinent publications
- Contextualization of results from select studies
- Evaluation of scientific communication targets

Enhanced literature reviews

- Manage all types of literature reviews
- Conduct non-systematic literature reviews with additional AI-assisted quality control
- Conduct systematic literature review search and screening in a single platform

With the evidence constantly evolving, stay on top of it, all in one place

Quick answers

Reliable sources

Flexible for all research needs

EVID allowed us to filter on study types and outcomes, saving us weeks of manual effort, which was critical for this urgent update.

-PHARMA CLIENT

The screenshot displays the EVIDAI web application interface. On the left, there's a sidebar with filters for 'Keywords', 'Inclusion Decisions', 'Excluded Keywords', and 'Labels'. The main area shows a table of search results with columns for Year, Author, Title, and a status indicator. A 'View PICO Table' button is visible. On the right, a 'Paper Summary' for a study on 'Large-Scale Whole Genome Sequence Analysis of >22,000 Subjects Provides no Evidence of FMR1 Premutation Allele Involvement in Autism Spectrum Disorder' is shown, including the abstract and keywords.

EVIDAI

The only AI-powered platform that enables the entire literature review process

- Search across multiple trusted sources (e.g. *PubMed*, *ClinicalTrials.gov*)
- Streamlined screening tools
- End-to-end reference management
- Comprehensive, traceable data extraction
